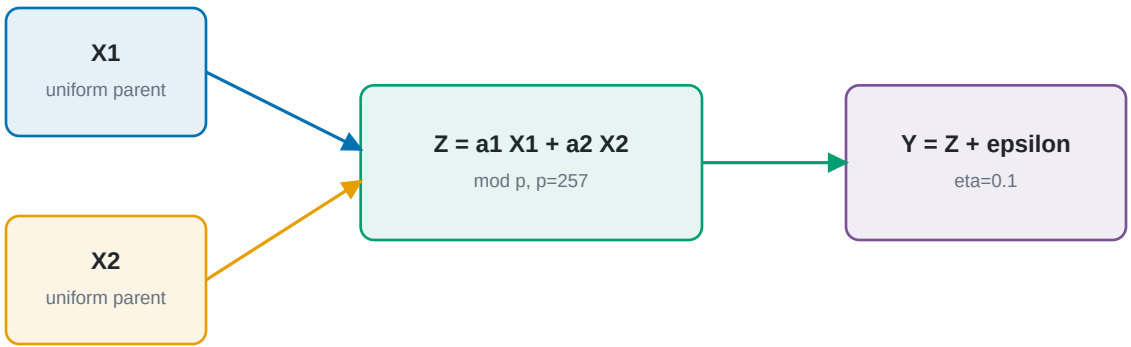
Pure-synergy task and transient full-support cue family

CONFIRMATORY

A Controlled finite-field task



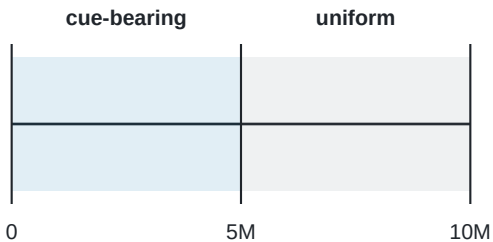
Pure synergy under uniform full support

I(Y; X1) = I(Y; X2) = 0

I(Y; X1,X2) = log(p) - H(nu_eta)

Every ordered pair remains possible.

B Cue then removal



Confirmatory targets

- **R0** C_single = 0
- **R1** C_single = 0.016
- **R2** C_single = 0.065092

m = 64; exact soft labels

Sampler changes at 5M; model state does not.
