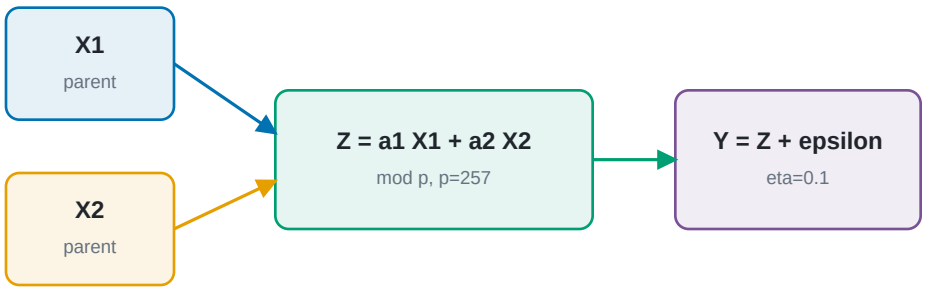
Pure-synergy task and transient full-support cue family

CONFIRMATORY

A Parent-to-center-to-target graph



B Pure-synergy identities at R0

I(Y; X1) = I(Y; X2) = 0

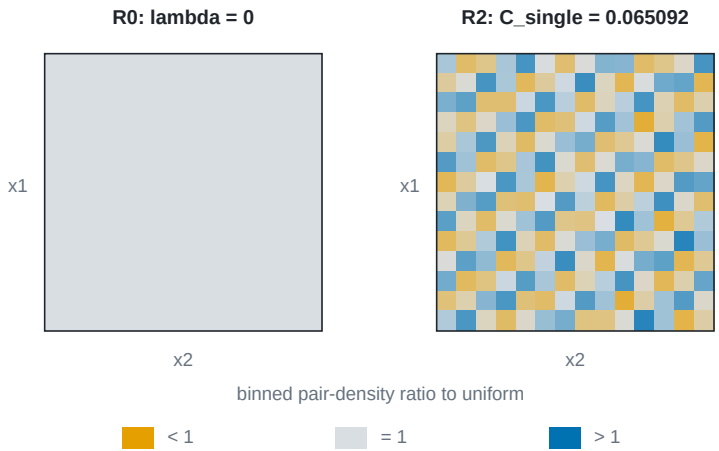
I(Y; X1,X2) = log(p) - H(nu_eta)

X1, X2, Z, and Y are marginally uniform

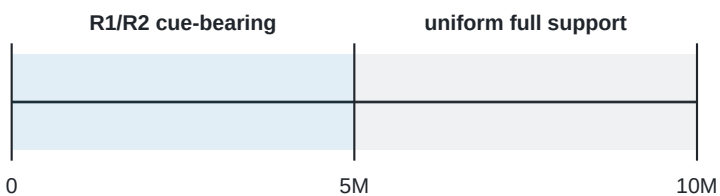
All p^2 ordered parent pairs have positive support

Cue conditions preserve marginals, not parent independence.

C Pair-distribution geometry



D Cue window and return to full support



Only the sampler switches at 5M; training continues to 10M.
